

# Horticulture

Oritain has strong partnerships with a range of horticulture producers. We can test the origin of horticultural products including apples, lettuce, seeds, berries and kiwifruit.

Example of Kiwifruit origin fingerprints

Each cluster represents an origin fingerprint for a particular country, and each point within the cluster represents a sample. If the sample fits inside a cloud, it is deemed to be consistent with that country of origin.

Oritain can answer the following questions:

- Is the product from New Zealand?
- What country is the product from?
- Is this product from a specific farm/orchard?
